

Purview Data Security Posture Management (DSMP)

Notes	Screen Grabs
There is a relationship between Objectives and Remediation and Posture. Objectives: - What is my data security risk and area of focus. Remediation Plan - How do I use the Purview solutions to achieve my Objectives? Posture - What is my current state and trends.	

Notes

Navigate to **Objectives** and review the listed Data Security Objectives.

Note:

Note:

I've highlighted **Prevent data exposure in Microsoft 365 Copilot interactions** in this example but there are more as you scroll down.

You'll notice the objectives have different

You'll notice the objectives have different status (one is green) based on the remediation plan status.

Note that for each Objective there are links

Note that for each Objective there are links to **View Remediation Plan** and to the right, a **View Objective** Link.

Data protection | Microsoft 365 Copilot

Prevent data exposure in Microsoft 365 Copilot interactions

30,916 Microsoft 365 Copilot and Microsoft Copilot interactions with sensitive data were detected from your organization in the last 30 days, an increase of 5%. This could indicate emerging patterns of data exposure.

30.9K interactions

↑ +5% in last 30 days

25.2K ↗ +2%

User prompts

256 ↗ +3%

Files overshared

[View remediation plan](#)
 [Copilot prompts](#)

[Take action to reduce risk](#)
 Taking action could reduce sensitive interactions from 30.9K to 22K, which is about a 29% decrease.

Review objective →

Data protection | Oversharing

Prevent oversharing of sensitive data

32,729 items are unlabeled and contain sensitive data from Microsoft 365 and Microsoft Fabric in the last 30 days, an increase of 4%. This could indicate emerging patterns of oversharing sensitive data.

21.1K items overshared

↑ +5% in last 30 days

4.2K ↗ +2%

Total unlabeled items

356 ↗ +3%

Items shared externally

[View remediation plan](#)
 [Copilot prompts](#)

[Take action to reduce risk](#)
 Taking action could reduce oversharing files from 32.7K to 16.3K, which is about a 50% decrease.

Review objective →

Data protection | Exfiltration

Prevent exfiltration to risky destinations

Notes

Explore the multiple levels of detail within an Objective you find most relevant or interesting.

Click – **View Objective** (the link to the right of the objective)

Continue on using the screen shots as a guide. As you drill through, you will find more granular detail.

Copilot prompts

Take action to reduce risk

Taking action could reduce exfiltrated files from 2.4K to 1.1K, which is about a 54% decrease.

Review objective →

Data discovery

AI apps

Discover unmonitored data sources referenced by AI apps

2,956 AI app interactions referenced unmonitored data sources in the last 30 days, an increase of 4%. Microsoft Purview supports these data sources but can't monitor them until they're connected. To discover and protect these data sources in DSPM, connect them to Microsoft Purview through partner-built connectors.

2.9K AI app interactions

↑ +4% in last 30 days

25 ↗ +2%

Domains belonging to these data sources

1.5K ↗ +3%

AI apps referencing these data sources

View remediation plan

Copilot prompts

Take action to reduce risk

Taking action could reduce AI interactions referring to unmonitored data sources to zero.

Review objective →

Data protection

Exfiltration

Prevent exfiltration to unsanctioned AI apps

24,700 files were shared in unsanctioned AI apps in the last 30 days, a decrease of 5%. The risk is improving, but some sensitive data use in unsanctioned AI apps is still occurring.

Notes	Screen Grabs
	Why it matters?  Quality and accuracy: • From alerts to actions: outcome playbooks, not noise.  Discovery and visibility • Board-ready reporting: trends, owners, business impact—at a glance. • Prove progress: verify policy impact, show risk going down. • Audit-friendly: exportable evidence, not screenshots.  Simplicity • One control plane: less swivel, faster remediation.

Notes

Navigate to **AI Observability**

Note that this tenant has a number of high risk agents which are interacting with sensitive information.

The Zava Procurement Agent has been flagged as High Risk due to it's interactions with sensitive information. There are 2 specific activities of concern. Can you see what they are? Explore the live environment for any similar examples.

Notes	Screen Grabs
	Why it matters?  More remediation • Close exposure fast with targeted, item-level fixes directly from Data Risk Assessments. • Cut oversharing by tightening access on the exact files/links that matter.  Agentic AI • Inventory every AI agent (Microsoft + 3P) that touches sensitive data—no more shadow agents. • See risky behaviors across agent↔human/tool/agent interactions to catch issues early. • Extend familiar Purview controls to agents via identity-aware policies (e.g., Agent ID).
